Bamboo for Counter tops Advantages --- Durable & Green & Unique

1. Bamboo is a green, environmentally conscious material because when managed responsibly, it is a fast, sustainable source of raw material for a wide variety of uses. Bamboo grows very rapidly and reaches have stable maturation in 4 to 7 years. Compare that to a hardwood or even an evergreen tree which takes much longer to reach the point where it can provide useful amount of material.

When harvested, the roots of the bamboo plant are also preserved and the same plant will regenerate usable product within another 5 years.

2. If you've been trying to find an alternative counter top s material that looks unique but still offers good functionality, bamboo might be a good choice.

3. To understand whether bamboo is good choice for a counter top material you first need to first understand something about the material itself. That is it's not wood but a form of grass.

4. The key point to understand about most things made from bamboo is that as a building material, bamboo is an "engineered" product. It's an 'assembly' of sorts of many pieces of bamboo that are glued together to form boards and

panels, similar to how plywood is made.

5.Bamboo material,and as a result,bamboo counter tops,are made using for different configurations of bamboo Construction.

Bamboo Panels for Counter top has characters of:

Bamboo panel Solidity : 32HB

Bamboo panel Density : 0.79g/cm³

Bamboo panel strength : 1271kg/cm²

Bamboo panel Moisture Rate: 8%—12%

Bamboo panel glue: E0 and E1 grade with standard to ANSI-3.

Bamboo panel colors : Carbonized (Chocolate or caramel) and Natural (White)

Bamboo panel structure : Horizontal , Vertical, Cross Horizontal , Cross Vertical

Cross Horizontal and Cross Vertical is most popular used in counter top because of the high stability.
